INDUSTRIAL PRODUCT SELECTION GUIDE

"Choose the right tool for the job" are words to live by—especially when it comes to lighting. Ceiling height, obstructions, wall color, and other variables affect the light that we eventually see. Start with these guides to connect your project with Straits® Lighting quality products. For advanced projects, please contact one of our expert lighting specialists for more information.

LED TUBES

UL Type A
UL Type A lamps are designed for plug-and-play installation with existing electronic fluorescent ballasts. This lamp offers the simplest and fastest type of installation. Consult product spec sheet for a list of compatible ballasts.

UL Type B
UL Type B Lamps use an internal driver to be powered from the main voltage. The existing fluorescent ballast must be disconnected from the fixture.

UL Type C
UL Type C lamps use an external driver to be powered from the main voltage. The existing fluorescent ballast must be disconnected from the fixture.
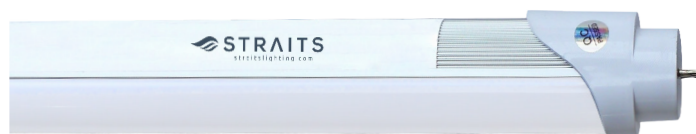

UL Type A&B
UL Type A and B lamps combine internal drivers with ballast-compatible technology to make an ultra-versatile lamp. Excellent for large retrofit projects with a large assortment of fluorescent ballasts.
